

Prompt Engineering 101: Beginner intro to LangChain

Lev Konstantinovskiy
PyData DE 2023

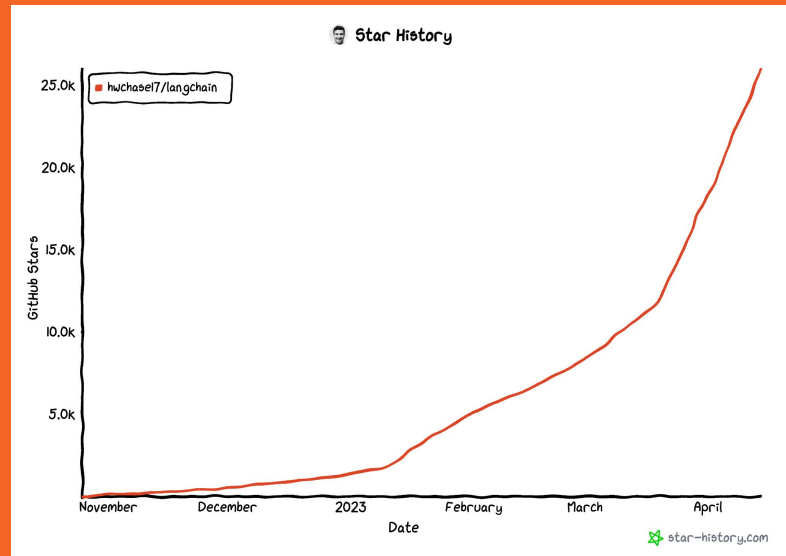

AGENDA

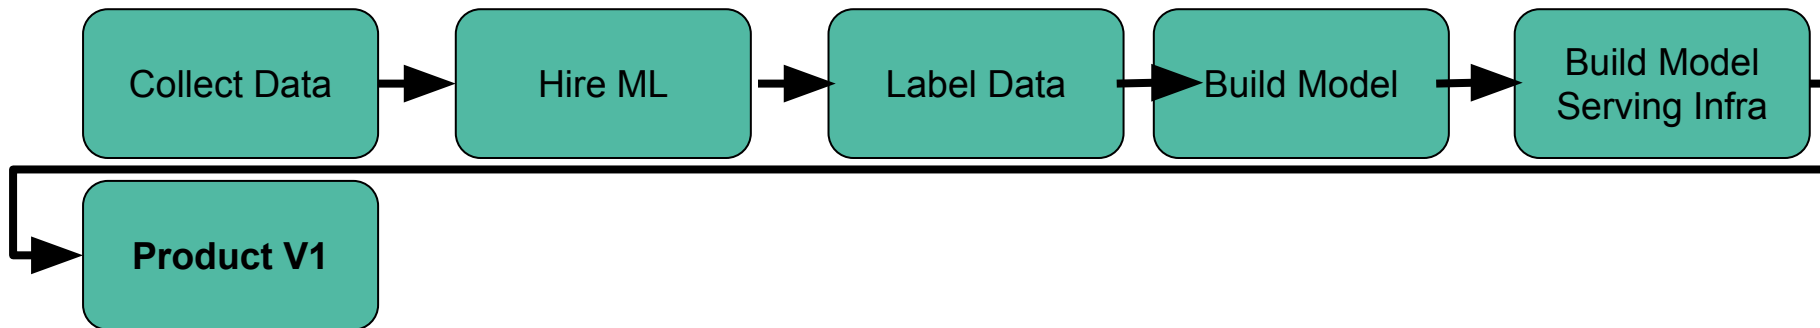

1. LLM world overview
2. Example deep-dive
3. Evaluation
4. The future

Why The Hype?

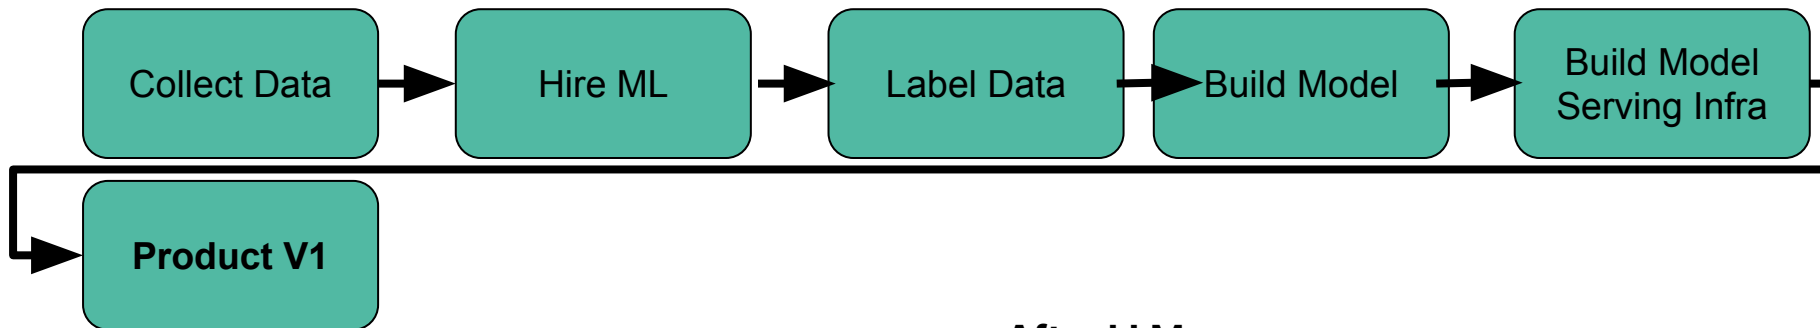

6 months old
\$10mln seed April 2023

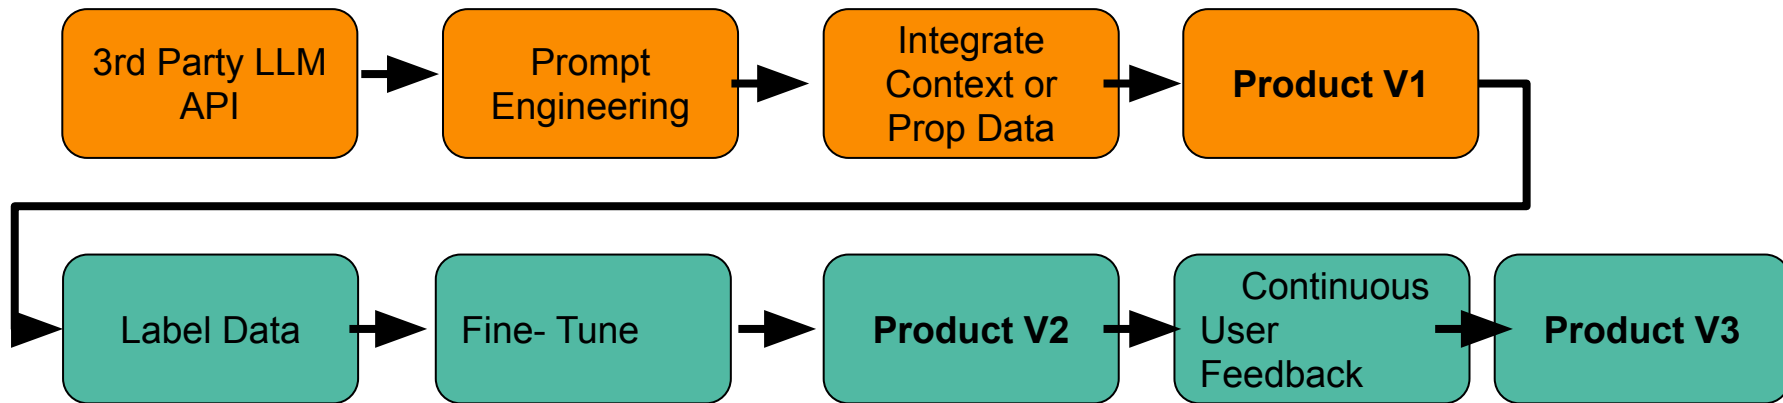

Building ML prototypes before LLMs was hard

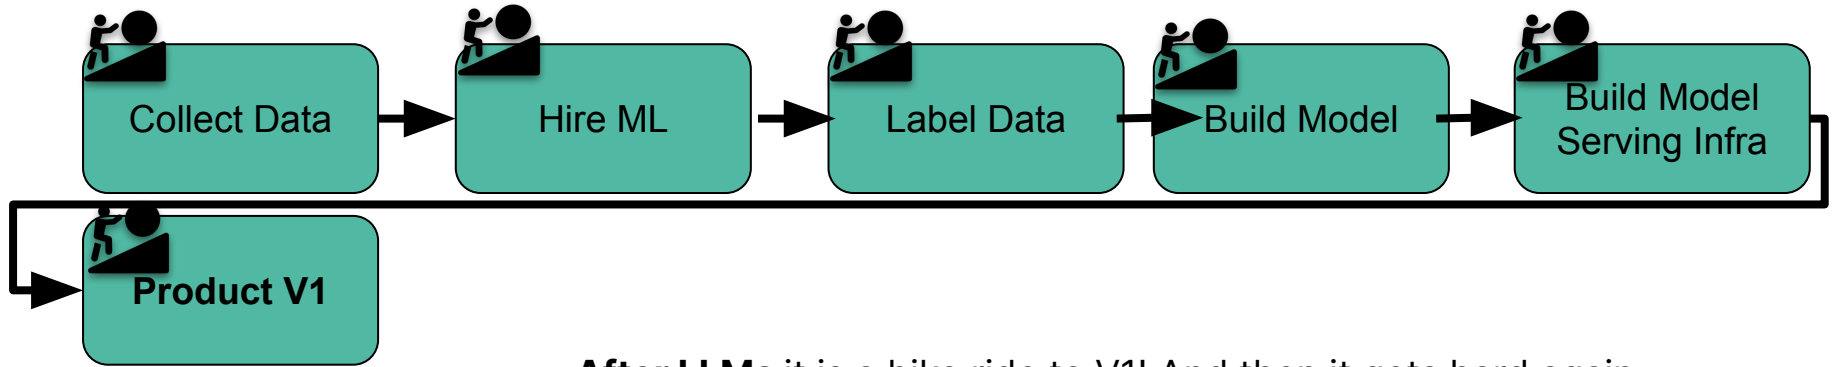

Building ML products before LLMs

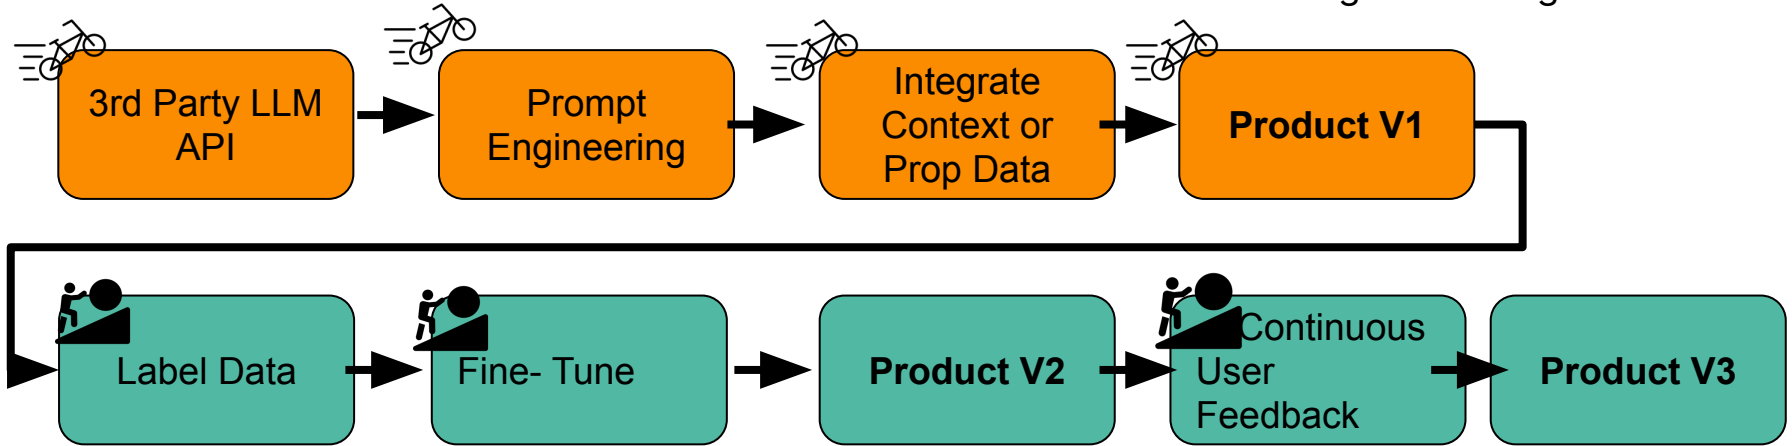

After LLMs

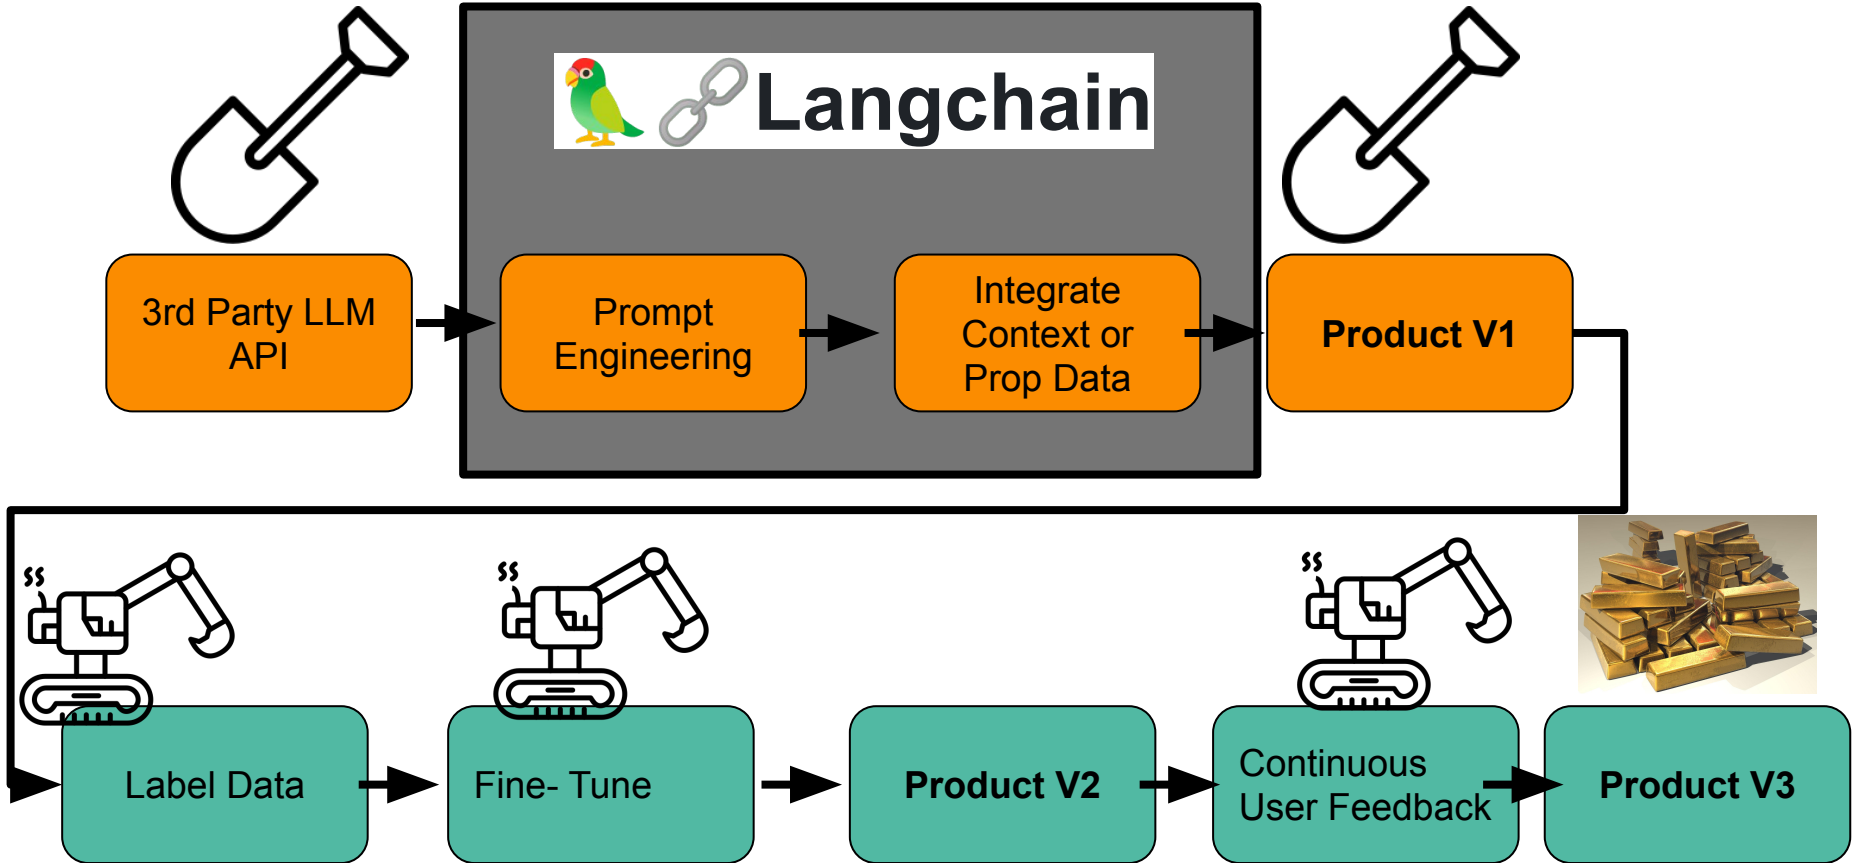

Before LLMs life was hard

After LLMs it is a bike ride to V1! And then it gets hard again

During a Gold Rush, Sell Shovels!

Code Example

Answer the questions:

**When is the PyCon DE & PyData
Berlin 2023 conference?**

**How many days are between that
date and today?**

You can use the internet and Python
REPL

Notebook in repo:

<https://github.com/tmylk/langchain-agent-qa/blob/main/AgentQA.ipynb>

Tool

```
tools = load_tools([
    "serpapi",
    "llm-math"],
    llm=my_llm)
my_agent =
initialize_agent(
    tools,
    my_llm,

agent="zero-shot-react
-description",
    verbose=True)
```

LLM learns new tools very easily from short description in Prompt

"Calculator: Useful for when you need to answer questions about math."

Agent

- **Non-deterministic.** Makes its' own decisions.
- Every time we call it, can get a different result.
- Google Search results change
- Underlying LLM is non-deterministic
- "Agent-as-a-service" trend.

Answer: The PyCon DE & PyData Berlin 2023 conference is on 16 January 12:00 CET and there are 45017 days between that date and today.

Do you offer discounts for purchasing multiple tickets at once?

No.

Reselling Tickets

Tickets are personalized. Re-selling tickets is prohibited. It's ok to order tickets for a friend of subsidiary with reimbursement.

When are you going to start selling the tickets?

Ticket sales will open

16 January 12:00 CET.

Prompt Engineering is tricky

Small change to prompt and tools - big change in result.
Only works for a flimsy V1 of the product. See notebook.

- Google + Python = wrong conference date, correct today's date
 - Indexed Website + PythonMath = **correct conference date(!)**, wrong today's date
 - Indexed Website + Python for dates = wrong conference date, correct today's date
 - To-Do list generator = goes on a tangent about conference food
-

Self-Evaluation

Inputs

input: 3

Grade the student answers based ONLY on their factual accuracy. Ignore differences in punctuation and phrasing between the student answer and true answer. It is OK if the student answer contains more information than the true answer, as long as it does not contain any conflicting statements. Begin!

QUESTION: When is the PyCon DE & PyData Berlin 2023 conference? How many days are between that date and today?

CORRECT ANSWER: On 17 April. There are -2 days

STUDENT ANSWER: The PyCon DE & PyData Berlin 2023 conference is on 16 January 12:00 CET and there are 45014 days between that date and today.

EXPLANATION:

Copy to clipboard

Outputs

output 3:

1. Check the date of the conference: The correct answer is 17 April, while the student answer is 16 January.
2. Check the number of days between the conference and today: The correct answer is -2 days, while the student answer is 45014 days.

GRADE: 0

Future of LangChain

- TypeScript support on par with Python
 - *Frontend dev skills are enough create an ML product V1 in 2023*
 - Don't worry. Python still needed for V2 and V3
 - More new papers implemented in nice Python
 - Production support by LangChain Inc
 - More Agents, Document readers, Retrievals, Input and Output formats
-

Thank you.

Join a meetup to code Langchain together.

MON, APR 24, 2023, 7:00 PM CEST

TDD with LangChain as an Ensemble

🗉 Online event

This time we will write an agent app in the new LangChain framework that makes it easy to work with Large Language Models.
How easy is it to do Test Driven Development when calling LangChain and ChatGP...
